

Adding a sparkle to classroom teaching: - Introducing Autograph

Douglas Butler
Oundle School
Peterborough, UK

Autograph is brand new PC software for senior secondary and junior college mathematics. It allows classroom teachers to bring coordinate geometry and statistics topics to life through the use of dynamically linked images.

Autograph has a powerful text-based mathematical notation entry system
Which accepts fully implicit expressions right up to 2nd order differential equations.

Delegates will be trying examples from the teaching of graphs, calculus, transformations, vectors, histograms (covering the tricky topics of discrete and continuous data, and frequency and frequency density), probability distributions and sampling.
